

PERKO® & **PERKOMATIC**®

Concealed Door Closers

SAMUEL HEATH

Concealed Door Closers

Our concealed door closers have been closing doors in a wide variety of commercial, leisure, public and domestic buildings for over 35 years, establishing themselves as the preferred choice for specifiers and contractors throughout the world.

Recognised as an effective means of providing quiet, unobtrusive and economic closing, Perko® and Perkomatic® create clean, unhindered aesthetics for a door, corridor and room, eliminating the need for unattractive and intrusive surface mounted closers.

Just because our door closers are concealed doesn't mean we have neglected their looks; both Perko® and Perkomatic® forends are now available with polished brass, chrome, satin chrome and bronze metal antique finishes to complement traditional, retrospective and contemporary decorative styles.

Great looks are matched by the exceptional levels of performance and quality for which all Samuel Heath products are renowned.

Independent fire tests have verified that Perko® and Perkomatic® are suitable for use on half-hour and one hour latched fire doors. Durability and quality are assured by testing to 500,000 closing cycles and production under factory control systems accredited to BS EN ISO 9001: 2000.

Installation is straightforward, involving simple drill and rebating procedures according to the template supplied with each closer. Following this, each closer can be quickly and easily adjusted to suit various latchbolt conditions:

On Perko® the closure rate can be varied, whilst Perkomatic® features an adjustable latching action.

- Concealed - enhanced aesthetics
- reduced opportunity for vandalism
- Fire approved - BS EN 1634-1:2000 approved for use on half-hour and one-hour fire doors
- Designed for light to medium duty installations
- Manufactured under BS EN ISO 9001: 2000 quality systems
- Tested to withstand 500,000 closing cycles

Fire and Performance

Both Perko® and Perkomatic® concealed door closers have been incorporated into doors which have been successfully fire tested at the Bodycote Warrington Fire Research Centre. At the end of the tests, the integrity of the doors in the vicinity of the closers was maintained. Thanks to its flash point of 225°C the hydraulic fluid within the Perkomatic® door closer offers excellent resistance to high temperatures and was unaffected by the fire tests, as our assessment to BS EN 1634-1 shows.

Samuel Heath can provide comprehensive documentation and assessments on the fire tests in which Perko® and Perkomatic® featured as proof of the products' suitability for appropriate fire door applications together with factory production control certification to demonstrate compliance with Building and Construction Products Regulations.

Both products are UL and cUL approved in the USA and Canada under the listing mark 85R6.

Technical support

Detailed information on Perko® and Perkomatic® is available on our website at www.samuel-heath.com.

Comprehensive advice on all aspects of specification, application and installation of Perko® and Perkomatic® concealed door closers is provided by our experienced technical design team.

Perko®

Perko® is the original concealed door closer, offering an economic means of providing automatic closing for internal doors up to 50.8kg in weight in light to medium use applications.

Solid brass anchor plates, powder coated mechanism housing and precision-engineered chain add to its appeal. Supplied with fixing screws and full fitting instructions.
